

ECCAIRS 4.2.8

Data Definition Standard

Aircraft make/models

The ECCAIRS 4 aircrafts are based on ICAO's ADREP 2000 taxonomy. They have been organised at three hierarchical levels.

Note that for ATM purposes there is a separate table 'Aircraft Type Designators'

 61001000 GLIDER

61000400	GYROPLANE	<i>GYROPLANE: an aircraft with an unpowered rotary wing, or rotor, that resembles a helicopter. It is powered by either an engine-powered propeller or a tow cable. The movement of air past the rotor causes the lift.</i>
61000600	MICROLIGHT	
61000900	MILITARY	
61000200	OTHER	
61000500	Paraglider	<i>A paraglider is a free-flying, foot-launched aircraft. The pilot sits in a harness suspended below a fabric wing, whose shape is formed by its suspension lines and the pressure of air entering vents in the front of the wing.</i>
61000800	Powered parachute	<i>A powered parachute (motorized parachute, PPC, paraplane) is a parachute with motor and wheels. The aircraft's airspeed is typically about 25–35 mph (40–60 km/h). PPCs operate safely at heights ranging from a few feet off the ground (while ground skimming, a popular use of the aircraft) to altitudes as high as 18,000+ feet (5.5 km). But typical operating heights are between 500 and 1500 feet (150–500 meters). Equipped with the standard 5 or 10 gallon fuel tank, PPCs can typically be flown for about three hours. They have very short take-off and landing rolls, sometimes less than 100 ft (30 m).</i>
